Summary — Junior Frontend Engineer with expertise in Next.js, Astro, Tailwind, Shadcn/ui, React Hook Form and Zod. I've worked at Aviatek for 1 and a half years building scalable, user-focused web applications and component libraries.

Skills

Frameworks Next.js, Astro

Libraries React, Tailwind, Shadcn/ui, React Hook Form

Languages TypeScript, CSS, HTML

Tools Git, Docker

Testing Vitest, Playwright

Speaking Spanish, English

Work Experience

Aviatek

June, 2023 – January, 2025

Frontend Engineer

- Engineered user interface components and pages for multiple large-scale projects, including an E-commerce site, Admin Dashboard, and a Landing Page, contributing to a 25% upgrade in user engagement.
- Enhanced the design of various components and pages by incorporating user feedback and analytics, leading to a 15% improvement in user experience metrics and increased overall satisfaction.
- Implemented comprehensive unit and end-to-end tests using frameworks such as Jest, Vitest, and Playwright, increasing code maintainability and security while reducing bugs by 40%.
- Co-developed a reusable component library for internal use, decreasing development time across projects by 30% through standardized UI elements.

Inmobilia Caracas

January 2023 – May 2023

Full-stack Developer

- Developed a full-stack application that heightened property visibility by 30%, effectively showcasing real estate listings to potential clients and providing an intuitive user experience that facilitated easy navigation.
- Engaged in continuous communication with clients to gather and refine requirements, which led to a 40% improvement in project delivery times by ensuring alignment on expectations and timely feedback in the development process.
- Successfully deployed and hosted the application on cloud infrastructure, achieving a 99.9% uptime and significantly enhancing user accessibility, allowing clients to access listings anytime, anywhere.

Projects

Gymnastic Center

March 2024 – July 2024

Health and Fitness Mobile Application

- Developed the front-end of the application, which led to a 40% increase in user engagement as indicated by user feedback collected during beta testing, demonstrating the effectiveness of the design and functionality in meeting user needs.
- Applied Hexagonal Architecture and Domain-Driven Design principles throughout the development process, significantly enhancing code maintainability and reducing bug reports by 30%, which streamlined future updates and improved overall project efficiency.
- Employed object-oriented design patterns to create reusable components, streamlining future development efforts, reducing development time by 30%.

UcabGo

September 2022 – January 2023

Food Delivery Web App for the University

- Designed and built both front-end and back-end systems for the application, resulting in a smooth and cohesive user experience that amplified order completion rates by 15%, ultimately enhancing customer satisfaction and retention.
- Co-authored system documentation, improving on-boarding time for new developers by 25%.
- Implemented comprehensive unit and end-to-end testing for core functionalities, achieving a 95% test coverage that ensured reliability and performance, significantly reducing the incidence of bugs and improving application stability.

Education

Universidad Católica Andrés Bello

Bachelor of Software Engineering
